

Contributing to Pharos RealFi Dashboard

First off — thank you for taking the time to contribute. This project is built for the Pharos ecosystem and every improvement helps the RealFi community.

Table of Contents

Code of Conduct

This project follows a standard Contributor Covenant. In short:

- Be respectful and inclusive
 - No harassment, discrimination, or personal attacks
 - Constructive criticism only
 - Report violations to the maintainers via GitHub Issues
-

How Can I Contribute?

Reporting Bugs

Before filing a bug, check existing [Issues](#) to avoid duplicates.

When reporting, include:

```
**Bug description:** Clear, one-line summary
**Steps to reproduce:**
  1. Open dashboard in Chrome 124
  2. Click "7D" tab
  3. ...
**Expected:** Chart should animate
**Actual:** Chart is blank
**Browser:** Chrome 124 / macOS 14
**Console errors:** (paste any errors)
```

Suggesting Features

Open an Issue with the `enhancement` label. Include:

- What problem does this solve for Pharos users?
- Rough description of how it should work
- Any relevant Pharos protocol context (SPNs, staking contracts, RWA types)

Adding Real Data Integration

The highest-value contributions right now are replacing mock data with live Pharos RPC calls. Priority areas:

1. **Wallet connection** — MetaMask + OKX Wallet via `window.ethereum`
2. **PROS balance** — read from connected wallet via Pharos RPC
3. **Staking data** — query Pharos staking contract
4. **Live TPS** — WebSocket subscription to Pharos node
5. **Transaction feed** — Pharos Explorer API or RPC `eth_getLogs`

UI/UX Improvements

- New panel types (yield history, validator performance, cross-chain flow)
- Mobile layout improvements
- Accessibility (ARIA labels, keyboard navigation, screen reader support)
- Dark/light theme toggle

Documentation

- Fix typos in README
 - Add architecture diagrams
 - Write integration tutorials
-

Development Setup

```
# 1. Fork the repository on GitHub
# 2. Clone your fork
git clone https://github.com/YOUR_USERNAME/pharos-realfi-dashboard.git
cd pharos-realfi-dashboard

# 3. Add upstream remote
git remote add upstream https://github.com/ORIGINAL_OWNER/pharos-realfi-dashboard

# 4. Start local dev server
python3 -m http.server 3000
# or: npx serve .

# 5. Open http://localhost:3000/pharos-dashboard.html

# 6. Create a feature branch
git checkout -b feature/your-feature-name
# or: git checkout -b fix/bug-description
```

Keep your fork up to date:

```
git fetch upstream
git checkout main
git merge upstream/main
```

Commit Message Convention

We follow the [Conventional Commits](#) spec:

```
<type>(<scope>): <short description>
```

```
[optional body]
```

```
[optional footer]
```

Types

Type	When to use
feat	New feature or panel added
fix	Bug fix
style	CSS/UI changes, no logic change
refactor	Code restructuring without feature change
perf	Performance improvement
docs	README, CHANGELOG, comments
chore	Build, tooling, dependency updates
test	Adding or updating tests

Scopes

Scope	Area
portfolio	Portfolio chart or RWA table
staking	PROS staking panel
network	Network pulse or TPS ticker
feed	Live activity feed
dapps	Ecosystem dApp explorer
ui	General layout, nav, banner
data	Data layer, RPC integration
theme	Colors, typography, CSS variables

Examples

```
git commit -m "feat(staking): add validator selector dropdown"
```

```
git commit -m "fix(feed): prevent duplicate events in feed rotation"
git commit -m "style(portfolio): increase chart height on desktop"
git commit -m "feat(data): connect live TPS via Pharos WebSocket RPC"
git commit -m "docs(readme): add chain configuration table"
git commit -m "refactor(ui): extract panel component into reusable CSS class"
```

Pull Request Process

1. Branch naming:

- **Features:** feature/description
- **Bugs:** fix/description
- **Docs:** docs/description

2. Before opening a PR:

- Test in Chrome, Firefox, and Safari
- Test at 375px (mobile), 768px (tablet), 1440px (desktop)
- Check browser console for errors
- Update CHANGELOG.md under [Unreleased]
- Update README.md if you added a new feature

3. PR description template:

What does this PR do?

Brief description of the change.

Why?

What problem does it solve? Link to issue if applicable. Closes #123

Screenshots (if UI change)

Before / After screenshots or GIF.

Checklist

- [] Tested in Chrome, Firefox, Safari
- [] Mobile layout checked (375px)
- [] No console errors
- [] CHANGELOG.md updated
- [] README.md updated (if new feature)

4. Review process:

- At least 1 maintainer approval required to merge
 - Address all review comments before merge
 - Squash commits if the PR has many small fixup commits
-

Style Guide

CSS

- Use existing CSS custom properties (`--accent` , `--deep` , etc.) — do not hardcode colors
- New panels should use the `.panel` class as a base
- New animations should use CSS keyframes, not JS-driven style manipulation
- Mobile-first breakpoints at `900px`
- Do not add external CSS frameworks (no Bootstrap, Tailwind)

JavaScript

- Vanilla JS only — no jQuery, no React, no frameworks
- Keep `setInterval` usage minimal and always `clearInterval` on cleanup
- All data that will eventually come from an RPC call should be clearly marked:

```
// MOCK DATA — replace with Pharos RPC call in v1.1
const tps = 34218;
```

- Use `const` and `let` , never `var`
- Arrow functions preferred for callbacks

HTML

- Semantic HTML5 elements where appropriate
- All interactive elements must have `cursor: pointer`
- Avoid inline `style=""` attributes; use classes or CSS custom properties

- New panels follow this structure:

```
<div class="panel">
  <div class="panel-header">
    <div class="panel-title"><span class="dot"></span>Panel Name</div>
    <!-- optional: tab row or action button -->
  </div>
  <!-- panel content -->
</div>
```

Issue Labels

Label	Description
bug	Something is broken
enhancement	New feature request
good first issue	Small, well-scoped — great for new contributors
help wanted	Maintainers need outside help
documentation	README, guides, comments
data-integration	Replacing mock data with real RPC/API
ui	Visual or layout change
performance	Speed or efficiency improvement
wontfix	Out of scope or intentionally not addressed
duplicate	Issue already exists

Thank you for building with Pharos.
