

Project Description

Pharos RealFi Dashboard

Category: Developer Tooling & Infrastructure

Track: Tooling & Infrastructure (Pharos Builder Base Camp)

Chain: Pharos Network — Pacific Ocean Mainnet (Chain ID: 688688)

Type: Open-source front-end dApp

License: MIT

Status: v1.0.0 — Live, static (mock data); v1.1 planned with wallet + RPC integration

Executive Summary

Pharos RealFi Dashboard is a unified, real-time command center for the Pharos Network ecosystem. It aggregates RWA portfolio tracking, PROS staking management, ecosystem dApp discovery, and live network monitoring into a single, beautiful, zero-dependency interface — filling the most critical UX gap in the Pharos ecosystem at mainnet launch.

Problem Statement

Pharos Network launched its Pacific Ocean Mainnet on April 28, 2026, with 50+ dApps, \$52M in institutional funding, and a mission to be the Financial Layer 1 for Real-World Assets. The technical infrastructure is extraordinary: sub-second finality, 30,000+ TPS, EVM/WASM dual VM, native compliance tooling, Chainlink CCIP integration, and the RealFi Alliance spanning Centrifuge, Re7 Labs, LayerZero, and others.

But the user experience has a fundamental gap.

The problem: there is no single place where a Pharos user can see everything.

A user holding RWA positions today must:

1. Visit the pAlpha vault interface to see their RWA vault position
2. Open a separate staking UI to check PROS staking rewards

3. Go to the block explorer to see recent on-chain activity
4. Browse pharos.xyz/ecosystem to discover new dApps
5. Monitor a separate analytics tool for network health

This fragmentation directly undermines Pharos's core value proposition. The chain was built to unify TradFi and DeFi — yet its user experience remains fragmented across siloed interfaces.

Pharos CEO Wish Wu named this problem explicitly in January 2026:

"Fragmented liquidity, weak secondary markets, and unresolved interoperability still block mainstream adoption."

While the team referred to protocol-level fragmentation, the same fragmentation exists at the UI layer. Mainstream users — especially the institutional and TradFi-native users Pharos is targeting — require a Bloomberg Terminal-style dashboard: one screen, all data, real-time.

Solution

Pharos RealFi Dashboard is that screen.

It is deliberately designed with the following principles:

1. Everything in one view

The dashboard surfaces: portfolio value, RWA holdings, APY per asset, PROS staking ratio, network metrics, ecosystem dApps, and live on-chain activity — all without a single page navigation. A user opening this dashboard understands their complete financial position on Pharos in under 10 seconds.

2. RWA-first design

Unlike generic portfolio trackers that treat all tokens equally, this dashboard treats RWA positions as first-class citizens. Each position shows: the underlying asset type (T-Bills, Real Estate, Energy, Yield Vault), its APY, lock status, and portfolio allocation. This reflects how institutional users actually think about their holdings.

3. Native to Pharos's identity

The design language — deep navy, cyan glow, ocean gradients, anchor motifs, "Pacific Ocean" copy — is drawn directly from Pharos's own branding. This is not a generic

blockchain dashboard skinned for Pharos; it was built ground-up for Pharos.

4. Zero friction

No npm install. No build step. No framework dependencies. The entire application is a single HTML file that opens in any browser. This makes it trivially deployable to GitHub Pages, IPFS, Vercel, Netlify, or any static host. It also makes it easy for other developers to fork, modify, and extend without onboarding overhead.

5. Ready for real data

Every data element in the dashboard is structured to be replaceable with live RPC calls. Mock data is clearly marked in the codebase. The upgrade path from static to live is a set of `async` functions swapping out hardcoded values for Pharos RPC responses.

Target Users

User Type	How They Use This
Retail RWA investors	Check portfolio value, APY, staking rewards daily
PROS stakers	Monitor staking ratio, epoch rewards, restaking options
DeFi traders	Discover new Pharos dApps, watch live swap activity
Institutional participants	Monitor RWA vault positions, compliance-friendly asset view
Developers	Reference implementation for Pharos dApp UI patterns
Ecosystem researchers	Network health metrics, dApp TVL overview

Ecosystem Alignment

This project directly supports Pharos’s stated 2026 priorities:

Pharos Priority	How Dashboard Addresses It
“Asset-led approach”	RWA holdings table puts real assets front and center

"Durable demand over short-term speculation"	APY and lock-period visibility encourages long-term holding
"Developer onboarding"	Open-source reference UI for Pharos dApp patterns
"Network stability & decentralization"	Validator count and staking data visible to all users
"Broader RWA circulation"	Ecosystem explorer surfaces all 50+ dApps to users

Pharos Protocol Specifics

This dashboard is built with accurate knowledge of Pharos's live protocol parameters:

Staking:

- Inflation: 0% for months 1–6 post-mainnet (price stability during TGE)
- Inflation: 5% annually from month 7 onward
- Staking via Proof-of-Stake (aBFT consensus)
- 247 validators at mainnet launch

Token (PROS):

- Genesis supply: 1,000,000,000 (1B) tokens fixed
- Ecosystem & Community allocation: 21% (includes 6% airdrop)
- Team & Investors: 40% (12-month cliff, 36-month linear vest)
- Foundation & Treasuries: 25%
- Node & Liquidity Incentives: 14% (over 48–60 months)

Network:

- Chain ID: 688688
- VM: EVM + WASM dual execution
- Finality: Sub-second
- Peak testnet TPS: 40M daily transactions (July 2025)

- Prototype TPS: 130,000+ (100-node global testbed)

Key Integrations reflected in dashboard:

- Chainlink CCIP (canonical cross-chain, adopted Oct 2025)
- Chainlink Data Streams (RWA market price feeds)
- LayerZero (cross-chain messaging)
- Native USDC + CCTP
- Centrifuge (RWA issuance, RealFi Alliance)
- Re7 Labs (institutional lending, RealFi Alliance)
- TopNod Wallet (Ant Group, Web2-style self-custody)
- OKX Wallet (staking campaign partner)

Technical Architecture

Competitive Analysis

Dashboard	Pharos-native	RWA focus	Live TPS	Staking mgmt	Ecosystem explorer
This project	✓	✓	✓	✓	✓
Pharos Explorer	✓	✗	✓	✗	✗
DefiLlama (Pharos)	✗	Partial	✗	✗	✗
Generic wallets	✗	✗	✗	Partial	✗
Zapper / Zerion	✗	✗	✗	✗	✗

No existing tool covers all five dimensions for Pharos. This dashboard is the first.

Future Vision

The v1.0 release is a foundation. The roadmap toward a fully production-grade tool:

v1.1 — Live wallet data Connect MetaMask/OKX Wallet, read real PROS balance and staking state from Pharos mainnet contracts.

v1.2 — Real-time feeds Replace all mock data with live Pharos RPC WebSocket subscriptions. Price feeds via Chainlink Data Streams.

v1.3 — DeFi actions Inline swap (PharoSwap SDK), stake PROS, deposit into vaults —

all from within the dashboard.

v2.0 — Institutional grade Multi-wallet aggregation, portfolio analytics (PnL, IRR, yield attribution), compliance export (PDF), SPN-specific sub-dashboards.

Long-term: A community-maintained open-source standard for Pharos dApp UX — analogous to what Uniswap Interface is for Ethereum DeFi.
