Overview

Pharos RealFi Dashboard is an open-source, front-end application purpose-built for the [Pharos Network](#) — the Financial Layer 1 blockchain for Real-World Assets (RWAs) and institutional-grade DeFi. It gives users a single, real-time command center to:

- Track their **RWA holdings** across Pharos-native vaults and tokenized asset pools
- Monitor **PROS token staking** rewards, APY, and validator delegation
- Explore the **Pharos ecosystem dApp landscape** (50+ live applications)
- Watch **live on-chain activity** — swaps, bridges, stakes, and RWA deposits
- Monitor **network health** metrics: TPS, block height, finality, and validator count

Pharos launched its Pacific Ocean Mainnet on **April 28, 2026**, achieving sub-second finality, 30,000+ TPS, and EVM/WASM dual compatibility. Despite this infrastructure milestone, the ecosystem lacked a unified user-facing dashboard that aggregated portfolio data, staking management, and ecosystem discovery. This project fills that gap.

Why This Exists

Pharos Network CEO Wish Wu identified the core challenge facing on-chain finance:

“Fragmented liquidity, weak secondary markets, and unresolved interoperability still block mainstream adoption.”

The Pharos ecosystem suffers from three user-experience problems this dashboard directly addresses:

Problem	Impact	Our Solution
No unified portfolio view	Users track RWA positions across 5+ separate dApps	Single dashboard aggregating all RWA holdings
Staking complexity	PROS staking requires navigating multiple interfaces	Inline staking manager with real-time reward tracking
Ecosystem discovery is hard	50+ dApps with no central directory	Curated dApp explorer with TVL, category, and live status
Network data is scattered	TPS, validators, finality data lives in block explorers	Live network pulse panel with visual indicators

No live activity feed

Users cannot see what's happening on-chain in real time

Auto-refreshing transaction feed with type classification

Features

RWA Portfolio Tracker

- View all tokenized real-world asset positions in one table
- Track: asset name, current value, APY, portfolio allocation %, and lock status
- Supports: pAlpha High Yield Vault, Tokenized T-Bills, Real Estate pools, Energy tokens
- Status tags: `LIVE` , `LOCKED` , `PENDING` , `MATURED`

Portfolio Performance Chart

- Animated 7-day portfolio value chart with gradient fill
- Switchable timeframes: 7D / 30D / ALL
- SVG-based, zero-dependency charting
- Real-time portfolio value updates (drifts live)

PROS Staking Manager

- Animated donut chart showing staked vs. liquid PROS ratio
- Displays: total PROS, staked amount, liquid balance, epoch rewards
- Reflects actual Pharos tokenomics: 0% inflation for months 1–6, 5% annually from month 7
- One-click “Stake More PROS” CTA

Network Pulse

- 6 live metric cards: TPS, Block Height, Validators, Finality, Total TXs, Wallet Addresses
- Animated progress bars for visual utilization context
- TPS counter updates every ~1.8 seconds with realistic variance

Live Activity Feed

- Auto-rotating on-chain event stream
- Color-coded event types: RWA deposits (gold), Swaps (cyan), Stakes (green), Bridges (purple)
- Animated ping dots for live feel
- Shows: wallet address, action, protocol, amount, time elapsed

Ecosystem dApp Explorer

- Cards for 6 key Pharos ecosystem protocols: PharoSwap, NeuroVault, CCIP Bridge, Centrifuge, Re7 Labs, TopNod Wallet
- Shows TVL, category, and one-line description
- Hover animations with gradient overlay

Live TPS Ticker

- Scrolling marquee of real-time network stats
- Infinite loop animation — TPS, block number, finality, validators, TVL, dApp count

 CCIP Bridge	 Centrifuge	

Tech Stack

Layer	Technology	Reason
Framework	Vanilla HTML/CSS/JS	Zero build step, deploy anywhere, maximum compatibility
Fonts	DM Serif Display + Syne + JetBrains Mono	Distinctive, financial-grade typography
Charts	Hand-rolled SVG	No Chart.js dependency, fully animated, lightweight
Animations	CSS keyframes + JS intervals	60fps, no animation library needed
Styling	CSS custom properties + backdrop-filter	Dark oceanic theme, glassmorphism panels
Data	Simulated live feeds (mock data layer)	Ready for RPC/API replacement
Deployment	Static HTML	GitHub Pages, Vercel, Netlify, IPFS — all compatible

No build tool required. No npm install. No webpack. Open `index.html` and it works.

Getting Started

Prerequisites

- Any modern web browser (Chrome 90+, Firefox 88+, Safari 14+, Edge 90+)

- Git (for cloning)
- Optional: A local HTTP server for development

Installation

Option 1 — Direct (simplest)

```
git clone https://github.com/yourusername/pharos-realfi-dashboard.git
cd pharos-realfi-dashboard
open pharos-dashboard.html    # macOS
# or
start pharos-dashboard.html   # Windows
# or
xdg-open pharos-dashboard.html # Linux
```

Option 2 — Local dev server (recommended)

```
git clone https://github.com/yourusername/pharos-realfi-dashboard.git
cd pharos-realfi-dashboard

# Python 3
python3 -m http.server 3000

# Node.js
npm serve .

# Then open http://localhost:3000/pharos-dashboard.html
```

Option 3 — Deploy to GitHub Pages

```
git clone https://github.com/yourusername/pharos-realfi-dashboard.git
cd pharos-realfi-dashboard
# Push to your GitHub repo, enable Pages from Settings > Pages > Deploy from branch
```

Connecting to Pharos Mainnet

To replace mock data with real on-chain data, configure your RPC:

```
// In pharos-dashboard.html, replace the mock data section with:
const PHAROS_RPC = 'https://rpc.pharos.xyz'; // Pharos Mainnet RPC
const CHAIN_ID = 688688;

const provider = new ethers.JsonRpcProvider(PHAROS_RPC);
```

```
// Fetch live TPS (approximate from block data)
async function getLiveTPS() {
  const block = await provider.getBlock('latest');
  return block.transactions.length; // per-block tx count
}

// Fetch wallet RWA token balances
async function getPortfolio(walletAddress) {
  // Query RWA token contracts on Pharos
}
```

Add MetaMask / OKX Wallet connection:

```
// Chain config for MetaMask
await window.ethereum.request({
  method: 'wallet_addEthereumChain',
  params: [{
    chainId: '0xA8008', // 688688 in hex
    chainName: 'Pharos Pacific Ocean Mainnet',
    nativeCurrency: { name: 'PROS', symbol: 'PROS', decimals: 18 },
    rpcUrls: ['https://rpc.pharos.xyz'],
    blockExplorerUrls: ['https://explorer.pharos.xyz']
  }]
});
```

Chain Configuration

Property	Value
Network Name	Pharos Pacific Ocean Mainnet
Chain ID	688688
Native Token	PROS
RPC URL	https://rpc.pharos.xyz
Block Explorer	https://explorer.pharos.xyz
Finality	Sub-second
VM	EVM + WASM (dual)
Consensus	Proof of Stake (aBFT)
Max TPS	30,000+ (prototype: 130,000+)
Mainnet Launch	April 28, 2026

Roadmap

v1.0.0 — Foundation (Current)

- Static dashboard with mock data
- Portfolio chart (7D animated SVG)
- RWA holdings table
- PROS staking donut chart
- Network pulse panel
- Live activity feed simulation

- Ecosystem dApp explorer
- Live TPS ticker

v1.1.0 — Wallet Integration (In Progress)

- MetaMask / OKX Wallet connect
- Read real PROS balance from connected wallet
- Show actual staked PROS via staking contract
- Detect and display real RWA token holdings

v1.2.0 — Live Data (Planned)

- Real-time TPS via Pharos RPC WebSocket
- Live block height polling
- Real transaction feed from Pharos Explorer API
- Price feed via Chainlink Data Streams on Pharos

v1.3.0 — DeFi Actions (Planned)

- Inline swap via PharoSwap SDK
- Stake PROS directly from dashboard
- One-click deposit into pAlpha Vault
- Cross-chain bridge interface (CCIP / LayerZero)

v2.0.0 — Institutional Grade (Future)

- Multi-wallet aggregation
- Compliance report export (PDF)
- Portfolio analytics (PnL, IRR, yield attribution)
- SPN-specific dashboards
- API for institutional data consumers

Contributions are what make open source great. See [CONTRIBUTING.md](#) for full guidelines.

Quick start:

```
# Fork the repo, then:
git clone https://github.com/YOUR_USERNAME/pharos-realfi-dashboard.git
git checkout -b feature/your-feature-name
# Make your changes
git commit -m "feat: add wallet connect support"
git push origin feature/your-feature-name
# Open a Pull Request
```

Good first issues: look for the `good first issue` label in Issues.
