

Security Policy

Supported Versions

Version	Supported
1.0.x	✓ Active
< 1.0	✗ Pre-release, unsupported

Reporting a Vulnerability

Do not open a public GitHub Issue for security vulnerabilities.

If you discover a security issue in this project, please report it privately:

1. Open a [GitHub Security Advisory](#) on this repository
2. Or email the maintainer directly (address in GitHub profile)

Please include:

- Description of the vulnerability
- Steps to reproduce
- Potential impact
- Suggested fix (if you have one)

We will respond within **48 hours** and coordinate a fix and disclosure timeline with you.

Scope

This is a **front-end only** static application. Current v1.0.0 uses no backend, no server, no wallet connection, and no real RPC calls. The primary security considerations are:

In Scope

- XSS vulnerabilities in the HTML/JS
- Malicious dependency injection (if dependencies are added in future versions)
- Phishing risks if the domain/URL is spoofed
- Insecure wallet connection implementation (when added in v1.1)

Out of Scope (for v1.0.0)

- Pharos Network protocol vulnerabilities — report those to [Pharos directly](#)
 - Chainlink, LayerZero, or other integrated protocol bugs
 - Smart contract vulnerabilities — this app has no on-chain contracts
-

Security Best Practices for Users

1. **Verify the URL** before connecting any wallet to a fork of this dashboard
 2. **Never enter private keys** into any web interface
 3. **Use hardware wallets** (Ledger, Trezor) when connecting to any DeFi application
 4. **This app does not store any data** — it has no backend, no database, no cookies
 5. When wallet connection is added (v1.1+), always verify transaction details in your wallet before signing
-

Responsible Disclosure

We follow coordinated disclosure:

- Reporter notifies us privately
- We confirm and assess within 48 hours
- We develop and test a fix
- We release the fix
- We credit the reporter in the release notes (unless they prefer anonymity)

Thank you for helping keep the Pharos ecosystem secure.
